

Review Guide

One review per assigned project per round (MS1, MS2, MS3): 300–500 words, PDF, anonymous. Use these four headings.

A checklist for your own document, not a form to fill in. Deadlines and weights: see the project slides.

YOUR DOCUMENT

Review of P<projectID> — MS<n>

No name: not in the text, not in the PDF metadata.

1 Summary

- ☐ 2–3 sentences in your own words: what does the project do?
- ☐ Shows that you engaged with the actual content, not just the title.

2 Strengths

- ☐ What is well thought out, and why is it a strength?
- ☐ Be specific: “the backfill replays the API day by day, so a gap can be repaired without rebuilding”, not “good code quality”.

3 Concerns or gaps

- ☐ What is unclear, missing or risky?
- ☐ Name the thing: file, line, feature, number.
- ☐ Evidence beats opinion: what did you check, count or run?

4 One concrete suggestion

- ☐ One actionable thing the author can do before the next milestone.
- ☐ Reasonable effort: something that fits into the next few weeks.

FORMAT

File name MS<n>_P<projectID>_Reviewer<A|B>.pdf (e.g. MS2_P12_ReviewerA.pdf)

- 300–500 words
- PDF only (not .docx, not a link)
- no name in the text or PDF metadata (check File → Properties)
- never commit reviews or drafts to your repo
- both reviews in one ILIAS “MS<n> Reviews” submission
- late reviews are not distributed and score zero

MS2 AND MS3 Start from the author’s docs/ms<n>_summary.pdf, then read or run the code. README-only reviews score low.

HOW REVIEWS ARE GRADED

Strong: engages with the actual content, names a specific technical risk, offers an actionable fix. **Weak:** generic praise or criticism that fits any project. “Great work” earns zero.
