

Bachelor AI - MLOps

05D EXERCISE KICKSTART

Tobias Mérinat

`tobias.merinat@hslu.ch`

DEPARTMENT OF INFORMATION TECHNOLOGY
Lucerne University of Applied Sciences and Arts
6343 Rotkreuz, Switzerland

September 17/24 and October 15 2026

- Codespaces has a rather short default timeout of 30 minutes
- For the lecture, it is best to increase it to 120 minutes
- Github profile -> Settings -> Codespaces -> *Default idle timeout*
- You can also lower the *Default retention period* from 30 days to 14 days

Start codespaces from github repository

- Go to
https://github.com/tobycheese/hslu_bachelor_ai_hs_2026
- Click on the green Code button
- Select the Codespaces tab and click on *Create codespace on master*
- Wait a moment. . .
- In case you get a timeout, reopen the page
- In the terminal, execute the commands

```
cd exercises/  
docker compose pull
```

Open the exercises in the browser

- The exercises are available as html files in the github repo
- Clone the repo or download *html.zip* to your laptop and open the first exercise in your browser
- Do not open the files from within codespaces, or else the buttons will not display correctly
- The first exercise is called *06_Infrastructure_introduction.html*
- There are buttons that you can click on to show suggested solutions

Important: If you want to keep your work, you have to download it from codespaces before you delete the codespace.

A look at codespaces

- You see the VS Code in the browser window
- You can open files, execute commands, open new terminals and connect to web applications that you have started
- If you lose your browser window, you can always reconnect via <https://github.com/codespaces>, where you see all your running and stopped codespaces
- You can *stop* and later *restart* your codespaces without losing any data
- If you *delete* a codespace, you lose your data

- You can now do the first two exercises
- You find the html files that guide you through the exercises in the files
 - 06_Infrastructure_introduction.html
 - 07_A_simple_model.html
